

The Solo and Small Firm Legal Technology Guide is an amazing tool for managing partners and law firm administrators. With this book, law firm managers now have answers to all their technology questions at their fingertips, truly making it easier to make critical technology decisions- from which computers, monitors, printers and scanners to buy; to case management and billing software; to document management systems; to voice and data systems; and even social media information. As a managing partner, I often find it difficult to obtain answers to multiple technology questions, however, this guide now simplifies these issues for me in a way that I can understand and saves me time. Every law office should have this book on their shelf or desk.
